

Botox

Botulinum toxin type A (Botox) injections diminish lines and wrinkles associated with facial expression, by relaxing the underlying muscles. Botox is used to treat vertical lines between the eyebrows and on the bridge of the nose, forehead lines, and crow's feet. Visible results have been shown to last up to 4 months.

\$10/unit (Typical treatment includes 20-40 units)

Soft tissue fillers

Soft tissue fillers are used to "plump" furrows and hollows in the face, reduce wrinkles, and give the skin a smoother and more youthful-looking appearance. They are also effective at contouring specific areas on the face, such as around the lips and mouth, and can correct depressions and scars. We offer **Juvederm** injectable gel. A typical treatment includes 1 to 2 syringes. Visible results have been shown to last up to 12 months.

\$550/syringe; \$950 for 2 syringes

Chemical Peels

Chemical peels involve application of a chemical solution to the skin, which causes the top layers of the skin to peel off. Chemical peels can reduce fine lines on the face, treat mild scars and some types of acne, fade discoloration (sun spots, etc) on the face, and refresh skin texture and color. We offer two types of chemical peels in varying strengths.

- Salicylic acid 20% or 25%- mild exfoliation; useful for acne, rosacea, and enhanced penetration of topical skincare products (\$125 for 20%, \$135 for 25%)
- Salicylic acid 30%- moderate exfoliation; useful for acne, blackheads/whiteheads, enhanced penetration of topical skincare products, and wrinkles and fine lines (\$145)
- Glycolic acid 40-50%- Mild exfoliation; useful for melasma, sun spots (\$150)
- Glycolic acid 60-70%- Moderate exfoliation; useful for skin discoloration from melasma, sun spots, and fine wrinkles (\$200)

Spider vein treatment (Sclerotherapy)

Spider veins are blood vessels that lie near the surface of the skin and range in color from red to blue to purple. Spider veins commonly occur on the legs. Sclerotherapy involves injecting small doses of a sclerosant solution directly into the unwanted vein with a very fine needle. Over a period of weeks, the treated vein turns into scar tissue that is absorbed by the body.

Fee: \$250/20 minutes (average time for 1 session)
